Runtime comparison of CG and TT-solve with conversions

Estimated runtime (FLOPs) vs Matrix size (n)

Solver, assumptions
- **TT-solve, all** $O(\log(n))$
- **TT-solve,** $O(\log(n)), s = 2$
- **TT-solve,** $O(\log(n)), I = 2$
- **TT-solve,** $O(\log(n)), I = 2, s = 2$
- **CG,** $z = O(n), \kappa = 10^2$
- **CG,** $z = O(n), \kappa = 10^{20}$
